Summary

Full Stack Engineer with hands-on experience in designing, developing, and deploying modern web applications. Passionate about creating scalable and maintainable software solutions by combining intuitive user interfaces with robust backend architectures. Proficient in building full-stack applications, integrating APIs, designing databases, implementing secure authentication, and optimizing performance using modern development tools and best practices. Committed to continuous learning, problem-solving, and delivering high-quality digital experiences.

Education

Bachelor of Science in Information Technology, 08/2022 – Present
Hadramaut University - Mukalla

Experience

Co-Founder & Full Stack Enginner, *Soul Media* 05/2026 – Present

- Designed and implemented scalable full-stack features for production web applications.
- Developed reusable frontend components and responsive interfaces using modern web technologies.
- Integrated backend APIs, authentication, and database operations to support business workflows.
- Contributed to improving application performance, code quality, and maintainability through clean architecture and best coding practices.
- Participated in the end-to-end development lifecycle, from requirements analysis and implementation to testing and deployment.
- Worked collaboratively within a development team using Git and Agile methodologies.
- Contributed to projects serving real users by delivering reliable, secure, and user-focused web solutions.

Full Stack Engineer Intern, 01/2026 – 04/2026
Information Technology Center of Hadramaut University

- Developed and maintained full-stack web applications.
- Built responsive frontend interfaces using modern JavaScript frameworks.
- Implemented backend APIs and integrated databases.
- Collaborated with cross-functional teams using Git.
- Improved application performance and code maintainability.
- Participated in testing, debugging, and deployment processes.
- Contributed to the development of institutional web platforms.

Projects

Studio Booking Platform

06/2024 – Present

- Designed and developed a full-stack studio booking platform.
- Implemented authentication, booking workflows, and an administrative dashboard.
- Built scalable database architecture and REST API integrations.
- **Tech stack:** Next.js, React, TypeScript, Supabase, PostgreSQL.

Mulhim Platform

04/2026 – 05/2026

- Contributed to the development of a modern web platform.
- Built frontend and backend features and integrated REST APIs.
- Enhanced application performance and maintainability.
- **Tech stack:** React, Next.js, TypeScript, Supabase , Tailwind CSS.

Skills

- | | |
|---|---|
| • Languages : TypeScript, JavaScript, C#, Python | • Freamworks : Next.js , React , Tailwind CSS , .Net , Express.js |
| • Backend & Data : Supabase , Firebase , MySQL , SQL Server , MongoDB | • AI & API : Rest APIs , OpenAI API , Stripe , Gemeni API |
| • Tools : Git , Github , Vercel | |

Languages

- | | |
|----------|-----------|
| • Arabic | • English |
